UTILITY SERVICES

We are more than a Utility Services provider. We are the leading equipment dealer in the Mid-South for new and used forklifts. We are ahead of the competition when it comes to construction equipment distribution. What this means is we know how to move equipment quickly, efficiently and within reasonable costs. We carry and distribute only top-tier equipment for our customers. So what better partner could you ask for when you need power, air or climate on your site or event? Go with the trusted team at Hugg & Hall Equipment Company, Utility Services.

PORTABLE POWER*HVAC*COMPRESSED AIR

PORTABLE POWER FROM 15KVA TO 2 MEGS:
Our portable power generators are diesel fired units that are built to withstand the construction atmosphere, yet are stylish and quiet enough for the event world. Our power distribution selection added to the power generation fleet, opens a wide variety of power options.

POWER DISTRIBUTION AND CABLING:
Designed to provide a safe and reliable connection from a power source (generator, utility, etc.) to a load (distribution panel, building, etc.). Our line of boxes and panels help you safely distribute portable power throughout any job site or event.

TOWABLE COMPRESSED AIR:
We offer air compressors from 185cfm up to 1600cfm with pressure options from 100psi to 350psi. Aftercooled, filtered air, diesel and electric options are available to fit your needs. These versatile products are also remarkably quiet, operating at 66-72 dba, with the acoustical enclosure. The small footprint and versatility of these units make them useful for both metal and plastic fabrication facilities, and the food and beverage industry.

PORTABLE AC UNITS FROM 1 TO 30 TON:
Our portable AC units come in 120, 230, and 480 volts. We offer package units and vertical event style ac units with heat strips. The event style units are perfect for portable tent or pavilion areas. The air can be ducted in or blown straight from the unit.

MTM EC200/ HI400 LP-NG / MH1000-MH500IQ:
The Blaze diesel, indirect-fired, portable heaters come with an embedded burner to produce clean breathable heat. This unit can have the heat ducted in with duct work or the exhaust ducted out. Our MH1000 units produce 1 million BTU and are indirect fired heaters as well. Set them outside and duct the clean heat inside.
